

RAAFINDRA WAHYU PRATAMA

System Engineer | Cloud & Infrastructure | Linux | Automation | Docker & Kubernetes

Indonesia | [+6285274126094/+6285780593428] | [Raafindra.work@gmail.com]

LinkedIn: [https://www.linkedin.com/in/raafindrawp/] | GitHub: [https://github.com/raafindra]

PROFESSIONAL SUMMARY

System Engineer with **8+ years of experience** in enterprise IT operations, production support, systems integration, troubleshooting, and automation. Experienced in supporting high-reliability environments for enterprise and telecommunications clients, with professional experience at **TechMahindra, Kyndryl, IBM, and Indocyber**. Strong technical background in **Linux/Unix, Shell scripting, Python automation, Docker, Kubernetes, monitoring, systems integration, and application support**. Experienced in collaborating across L1/L3 teams to investigate incidents and implement temporary or permanent solutions. Currently expanding hands-on expertise in **cloud infrastructure, DevOps, containerization, networking, and AWS**, with a long-term focus on Cloud Engineering opportunities in Singapore.

CORE TECHNICAL SKILLS

Cloud & Infrastructure

AWS | GCP | Linux | Unix | Windows | Docker | Kubernetes

Automation & DevOps

Python | Shell Scripting | Git | GitHub | Jenkins | CI/CD | Automation

Monitoring & Operations

Grafana | Log Management | Troubleshooting | Production Support | Incident Investigation | System Health Checks

Application & Middleware

Oracle WebLogic | Java | .NET | JavaScript | HTML | CSS

Database

Oracle SQL | SQL Server | MySQL

Other Technologies

Salesforce Administration | MkDocs | Technical Documentation | Systems Integration

PROFESSIONAL EXPERIENCE

TechMahindra Indonesia

System Engineer | June 2023 – Present

- Support the operation of **high-reliability enterprise solutions** for **Indosat Ooredoo Hutchison**, responding to technical and business requirements.
- Perform technical activities including **system analysis, solution design, development, product installation, systems integration, testing, troubleshooting, and log management**.
- Troubleshoot production issues across application and infrastructure environments and coordinate with **L1 and L3 teams** to implement temporary and permanent solutions.
- Develop and maintain **Shell and Python automation** to reduce repetitive operational tasks and improve operational efficiency.
- Perform operational monitoring and investigation of system and application issues using logs and monitoring tools.
- Support **Linux/Unix-based environments**, application services, and middleware components as part of day-to-day operations.
- Perform **Salesforce administration** as part of assigned technical responsibilities.

Kyndryl Services Indonesia

System Engineer | June 2022 – June 2023

- Supported high-reliability enterprise solutions for **Indosat Ooredoo Hutchison** in a production-oriented environment.
- Performed **technical analysis, systems integration, product installation, testing, troubleshooting, and log management**.
- Investigated operational incidents and coordinated with **L1 and L3 teams** to identify root causes and implement appropriate resolutions.
- Developed **Shell and Python automation** for repetitive operational activities.
- Supported application and infrastructure components to maintain service reliability and operational continuity.
- Performed Salesforce administration and related operational support.

PT JTI IBM

System Engineer | June 2020 – June 2022

- Supported high-reliability enterprise systems for **Indosat Ooredoo Hutchison**.
- Performed technical activities covering **system analysis, solution design, development, product installation, systems integration, testing, troubleshooting, and log management**.
- Coordinated with **L2 and L3 teams** to investigate escalated incidents and deliver temporary or permanent solutions.
- Developed automation using **Shell scripting and Python** to improve operational efficiency.

- Developed and maintained **monitoring dashboards and technical documentation using MkDocs**.
 - Supported day-to-day enterprise application and infrastructure operations.
-

PT Indocyber Global Technology

Software Developer | October 2017 – June 2020

- Developed and maintained **financial and loan calculation systems**, including FOS and T24-related applications.
 - Implemented application logic changes, API screens, and **E-KTP integration systems**.
 - Developed and maintained web applications for employee management and monitoring using **HTML, JavaScript, AJAX, .NET, SQL Server, and K2**.
 - Developed data collection systems for loan applications involving property guarantees.
 - Supported application maintenance, enhancement, troubleshooting, and system improvement activities.
-

SELECTED CLOUD & DEVOPS PROJECTS

Linux Server Health Check Automation

Bash | Linux | Cron | System Monitoring | Automation

- Developed a Bash-based server health-check solution to monitor **disk usage, memory availability, SSH, Cron, and Docker services**.
- Implemented reusable functions and service loops to make health checks modular and extensible.
- Implemented structured logging with **timestamps, severity levels, hostname, and overall health status**.
- Designed aggregated health-check logic that performs all checks before returning the final **exit code**.
- Integrated the health-check script with **Cron** for scheduled automation.
- Designed the script to return 0 for healthy systems and 1 for unhealthy systems, allowing monitoring and automation systems to consume the result.

Docker Infrastructure & Containerization Lab

Docker | Linux | Networking | Volumes | Environment Variables

- Practiced Docker container lifecycle management including image, container, start/stop/restart, removal, and troubleshooting.
- Implemented **custom bridge networks and Docker DNS/service discovery** for container-to-container communication.
- Practiced environment-based application configuration using Docker environment variables.
- Implemented Docker **named volumes** for persistent container storage and tested data persistence across container recreation.
- Investigated container failures using `docker logs`, `docker inspect`, `docker exec`, `docker stats`, and `docker top`.
- Practiced container networking, resource monitoring, persistent storage, and production-oriented troubleshooting scenarios.

EDUCATION

Bachelor of Computer Engineering

Andalas University

GPA: **3.15 / 4.00**

Graduated: 2017

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Cloud / DevOps Learning

- AWS Cloud Engineering Roadmap — In Progress
- Linux & System Administration — Hands-on
- Docker & Containerization — Hands-on
- Cloud Infrastructure & DevOps — In Progress

Planned / Target Certifications

- AWS Certified Cloud Practitioner / Associate-level certification pathway
 - Google Cloud Associate Cloud Engineer — Opportunity under evaluation
-
